

Abstract

A combination cart is disclosed. The combination cart includes a box for hauling a load. The box includes a bottom portion having four sides, and at least three wall portions attached to the bottom portion and extending perpendicularly outward from the bottom section. An axle is attached to the bottom section and includes wheels mounted on the axle disposed on either side of the box, and a pedal midway between the wheels. A handle with an accessory bar is mounted on the box for maneuvering the combination cart. A gate having an accessory box is mounted on the handle for when the combination cart is used as a dolly and on the box for when the combination cart is used as a cart.
